

Vulnerable Receptors Condition

SCN87F - Contaminated Land – Unexpected Contamination for Sensitive End Use

The proposed use of this site has been identified as being particularly vulnerable if land contamination is present, despite no specific former potentially contaminating uses having been identified for this site.

Should any discoloured or odorous soils be encountered during development works or should any hazardous materials or significant quantities of non-soil forming materials be found, then all development works should be stopped, the Local Planning Authority contacted and a scheme to investigate the risks and / or the adoption of any required remedial measures be submitted to, agreed and approved in writing by the Local Planning Authority prior to the recommencement of development works.

Following the completion of development works and prior to the first occupation of the site, sufficient information must be submitted to demonstrate that any required remedial measures were satisfactorily implemented or confirmation provided that no unexpected contamination was encountered.

Reason: It is the responsibility of the developer to ensure the safe development of the site and to carry out any appropriate land contamination investigation and remediation works. The condition is to ensure the risks from land contamination to the future users of the land and neighbouring land are minimised, together with those to controlled waters, property and ecological systems, and to ensure that the development can be carried out safely without unacceptable risks to workers, neighbours and other offsite receptors
